INTRODUCTION AND BACKGROUND

I'm a Lead & Senior Software Developer with 19+ years building and modernizing products across fintech, government, and crypto platforms.

My work combines hands-on implementation with technical leadership. I move comfortably from React and React Native interfaces to Python or Node services, APIs, PostgreSQL-backed systems, Docker-based environments, QA coordination, and release execution.

KEY SKILLS AND PREFERRED JOB TITLE

The title that best matches my current scope is Lead Full-Stack Engineer, though I also fit Senior Software Engineer, Staff-level product engineering, and consulting roles where execution depth matters.

- End-to-end delivery across mobile, web, backend, databases, QA, and release execution.
- Strong stack around React, React Native, TypeScript, Python, Node.js, PostgreSQL, and Docker.
- Practical AI usage to improve planning speed, implementation support, documentation, QA preparation, and delivery consistency.

SALARY AND NOTICE PERIOD

Compensation is open to discussion and should reflect role scope, expected ownership, and delivery impact.

My availability is flexible, and start timing can be aligned with the needs of the team or project.

WORK LOCATIONS CONSIDERED

I'm primarily interested in remote roles across the Americas, especially with teams that value direct communication, ownership, and measurable delivery outcomes.

I can also consider hybrid collaboration when it is strategically useful for the role or project.

If you need someone who can move between architecture, delivery, and execution detail, I'd be glad to t
