INTRODUCTION AND BACKGROUND

I am a Senior Software Lead with nearly two decades of experience modernizing digital products within highly regulated industries, including Fintech and Government. I am a versatile engineer who moves comfortably across the full stack—from developing intuitive React and React Native front-ends to engineering robust Python/Node APIs and PostgreSQL databases. My leadership extends beyond code; I am an expert in Docker-based deployments, QA strategy, and managing the full software development lifecycle to guarantee high-performance releases.

KEY SKILLS & TARGET ROLES

Target Roles: Lead Full-Stack Engineer, Staff Software Engineer, or Technical Consultant. I excel in high-ownership environments where deep execution and architectural oversight are required.

- Full-Cycle Delivery: Expert in end-to-end product delivery, spanning Mobile (React Native), Web (React), and robust Backend architectures (Python/Node.js).
- Core Stack: Advanced mastery of TypeScript, PostgreSQL, Docker-based environments, and CI/CD release management.
- AI-Driven Efficiency: Strategic use of AI tools to accelerate system planning, automate QA protocols, and ensure high-standard documentation and delivery consistency.

COMPENSATION & AVAILABILITY

Salary: Open to discussion based on role scope, ownership level, and total impact. I am looking for a partnership that reflects nearly two decades of technical expertise.

Notice Period: Flexible. Start dates can be aligned with the immediate needs of the project or team.

WORK PREFERENCES & LOCATION

Location: Primarily seeking Remote opportunities across the Americas. I thrive in cultures that value direct communication, radical ownership, and measurable outcomes.
